

Shoemaker, Ashley

Ashley Shoemaker, MD, MSCI is an Assistant Professor of Pediatric Endocrinology and Diabetes at Vanderbilt University Medical Center. Dr. Shoemaker is an internationally-recognized expert in hypothalamic and genetic obesity, particularly pseudohypoparathyroidism. Her translational research program focuses on the pathophysiology and treatment of obesity disorders. She has conducted clinical trials in hypothalamic obesity, pseudohypoparathyroidism, Prader-Willi syndrome and adolescent type 2 diabetes. She also directs a clinical program in pediatric prediabetes/type 2 diabetes and sees patients in a multi-specialty Prader-Willi syndrome clinic.

Dr. Shoemaker has a bachelor degree in Biology from The College of William and Mary and a medical degree from the Medical College of Virginia at Virginia Commonwealth University. She completed a residency in Pediatrics at Johns Hopkins University and then a fellowship in Pediatric Endocrinology at Vanderbilt University. During fellowship training, she also completed a master of science degree in Clinical Research.
